### THE LATE LAWRENCE MURRAY.

It is with deep regret that we learn of the untimely death of the hero of the Midlander disaster Lawrence Murray - who swam the flooded Medway Creek to rescue a number of children trapped in their carriage when the Midlander train crashed into the creek.

Lawrence, who was a keen athlete had a heart attack while playing football at Alpha on Sunday and died in the Alpha hospital. Though originally a Woorabinda native, Lawrence spent some time on the Palm Island Settlement where he took more than a passing interest in sport. He was a fast runner and a good high-jumper, as well as a first class footballer.

He was 43 years of age and leaves a widow and three children to mourn his loss. Before his death he worked as a fettler for the Railway Department.

Palm Islanders join in extending their deepest sympathy to his widow and children.

### HEADACHE A WARNING.

A headache is not a disease - but a warning.

When the head aches persistently, there's something wrong somewhere in the body, and the only sensible course is to let your doctor find the trouble.

(From the Queensland Health Education Council)  
-----

Psychiatrist: "Would you mind repeating what you just said?"

Patient: "I said for some reason or other no one likes me. Why don't you listen, you fathead?"
