-----  
WOMENS BASKETBALL.

The first three matches of the  
second round were played on Monday night,  
and in the first match between Waratah  
and Shamrock, a major upset occurred, as  
Shamrock won by 1 goal in the last few  
seconds of play.

Shamrock established a lead of  
6 goals to 3 in the first quarter, and  
Waratah from then on put forth every effort  
to catch up, but, of course, Shamrock  
could see the chance of a win, and some  
really fast and exciting play was  
observed.

In the third quarter, Waratah  
had the play at their goal, but did not  
manage to throw the goals. In the last  
quarter they drew level and a draw seemed  
likely, but in the last minute of play  
Iris Robertson was able to score the goal  
which won the match 17 goals to 16.

Next week, the draw is - Waratah v  
Swifts, and all who like to see a good fast  
game should come along.

The other teams to play next week  
are - Ravens v Margaret Haines team  
Shamrock v Primrose  
Jacaranda has the bye.

The other two matches were Swifts

against Primrose, with Swifts winning and Jacaranda v Ravens with Ravens in front, with 18 goals to 9.

-----  
HEALTHY TEETH.

Almost everyone is born with good foundations for dental health - but too few of us keep sound, **healthy teeth!** In fact, 90 per cent. of Queensland school children, aged between 5 and 14 years, have bad teeth!

This is despite the fact that 98 per cent. of new babies come into the world with healthy seed germs of teeth in the jawbones!

Obviously, something goes wrong soon after we see the light of day. But what is it that causes this drastic decline in dental health? Diet? Bad oral hygiene?

Well, first of all, let's look at what it's NOT.

It certainly is not the lack of essential foods for today's modern mothers and housewives see that their families get plenty of things like milk, wholegrain cereals, fresh fruit, crisp vegetables, meat and fish. And it is not the lack of oral hygiene. Surveys show that only 9 per cent. of Queensland school children suffer bad teeth as a result of laziness with a toothbrush.

Right! Now we know what it's

not,
